DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/13/03 has been entered.

Drawings

2. Figures 22 and 23 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Application/Control Number: 09/763,421

Art Unit: 2815

4. Claims 28 and 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Komoto et al. '824 B1. Komoto discloses (see, for example, FIG. 65) a light emitting device 100H comprising a lead frame (base) 110, fluorescent layer (fluorescent material containing layer) FL, light emitting element (light emitting diode element) 990, and resin (resin seal member) 140. Two prong-like projections (dam) extend from the base and surround the light emitting device. Such projections enclose the fluorescent layer and prevent the fluorescent layer from migrating (ensures that the fluorescent material containing layer is of a predetermined thickness). In column 36, lines 17-21, Komoto discloses the lead frame as reflective.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 28 thru 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isokawa et al. '637 in view of Yasui 64-036036 JPO. Isokawa discloses (see, for example, FIG. 1) a light emitting device comprising a substrate (base) 10, LED chip (light emitting diode element) 3, package (resin seal member) 6, first and second terminal electrodes 1, 2, and bonding agent (material containing layer) 9. In between terminal electrodes 1, 2, there is a hole, which contains the bonding agent. The vertical edges of terminal electrodes 1, 2 serve as a dam that prevents the bonding agent from spreading out and keeps the bonding agent of a uniform thickness. Isokowa does not disclose the bonding agent as being a fluorescent. However, Yasui

Application/Control Number: 09/763,421

Art Unit: 2815

discloses (see, for example, figure 1) a semiconductor device comprising a substrate 1, chip component 3 and adhesive (fluorescent material containing layer) 2. In the abstract. Yasui discloses the adhesive having a fluorescent agent. The fluorescent agent makes it easy to detect defective mounting of a chip component. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include the fluorescent agent of Yasui in Isokawa's invention in order to detect the defective mounting of a chip component.

Response to Arguments

7. Applicant's arguments with respect to claims 28-31 have been considered but are moot in view of the new ground(s) of rejection.

INFORMATION ON HOW TO CONTACT THE USPTO

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eugene Lee whose telephone number is 703-305-5695. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C. Lee can be reached on 703-308-1690. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7722 for regular communications and 703-308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
